PIYUSH SHARMA

DevOps Engineer | 1.7+ Years of Experience

+91-7691813348 | mr.piyush0270@gmail.com | LinkedIn

PROFILE SUMMARY

DevOps Engineer with 1.7+ years of experience designing and delivering scalable, secure infrastructure and CI/CD pipelines across multi-cloud (AWS, Azure, GCP) and containerized (Docker, Kubernetes) environments. Proven track record cutting cloud costs by 60%, leading a development team through the full software development lifecycle using agile methodologies, and driving client-facing requirement gathering and technical discussions. Strong background in risk and controls — including incident response and access governance — combined with hands-on full-stack development in Python/FastAPI and React. Experienced with GitLab pipelines, Jenkins, GitHub Actions, and application redesign/simplification initiatives.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, IAM), Azure, GCP (Compute Engine, Cloud Run, Load Balancer), Contabo VPS, Linode

CI/CD & Automation: GitLab CI/CD pipelines, Jenkins, GitHub Actions, GitOps workflows, GHCR, scripting (Bash, Python)

Containers & Orchestration: Docker, Kubernetes (K8s), Helm, ArgoCD

Infrastructure as Code: Terraform

Monitoring & Observability: Prometheus, Grafana, Grafana Loki, structured logging, Docker health checks

Networking & Security: NGINX, Cloudflare, UFW, SSL/TLS, Linux hardening, Secrets management, risk & access controls

SDLC & Practices: Agile methodologies, Git branching strategies, code reviews, application redesign & simplification

Languages & Frameworks: Python, Bash, JavaScript (ES6+), FastAPI, Node.js, Express.js, React

Databases: MongoDB, MySQL, Redis

WORK EXPERIENCE

DevOps Engineer — GoHashInclude Pvt. Ltd. *Jan 2026 – Present*

- Lead a development team, driving end-to-end delivery, code reviews, and technical mentorship while managing multi-cloud infrastructure across AWS, Azure, GCP, and VPS environments.
- Own client-facing engagement — leading requirement-gathering sessions, progress updates, and technical discussions to align delivery with business objectives.
- Reduced cloud infrastructure billing by ~60% through resource rightsizing, reserved instance usage, and eliminating idle compute, driving cost-optimization initiatives across projects.
- Designed and maintained CI/CD pipelines (GitHub Actions, GitOps workflows) and containerized applications with Docker, following agile delivery practices across the full software development lifecycle.
- Managed GitHub repositories, branching strategies (main/development/feature), and pull request reviews to enforce deployment-readiness and code quality standards.
- Implemented observability stack using Prometheus, Grafana, and Grafana Loki — built dashboards and alert rules to improve infrastructure visibility and incident response time.
- Hardened Linux servers with NGINX reverse proxy, UFW firewall policies, SSL/TLS termination, and systemd service management.
- Led incident response to an AWS account compromise — identified and terminated 300+ unauthorized EC2 instances across multiple regions, revoked leaked IAM access keys, and disputed $1,000 in fraudulent billing; restored production within 4 hours, strengthening risk and access controls.

Software Engineer (Backend & DevOps) — InnoSyte *Jan 2025 – Dec 2025*

- Worked as a full-stack developer — designed frontend and backend project architecture and built features end-to-end using React and Python/FastAPI.
- Owned deployment of client applications end-to-end on GCP — Docker containerization, NGINX reverse proxy, SSL/TLS termination, and GitHub Actions CI/CD pipelines with Secrets Manager for secure environment configuration.
- Standardized Git branching and release workflows (main/development/feature) across client repositories, reviewing every pull request for deployment readiness before merge to production.
- Built Python/FastAPI backend services for client e-commerce platforms — product catalogues, order management, and Razorpay payment integration — with JWT authentication, RBAC, and MongoDB.

- Developed React dashboards integrated with FastAPI backends, working across the full application lifecycle from code to production.

PROJECTS

Vistofy.in — AI-Powered Design & Image Editing Platform

- Designed and deployed a multi-service production platform (Canva-style design tool) using independently containerized services — frontend, backend, Redis, and a custom AI background-removal microservice.
- Built a Python-based background removal service using the birefnet-general segmentation model with optional Real-ESRGAN upscaling, running on a dedicated high-memory server with configurable worker allocation.
- Migrated frontend and backend services from Contabo VPS to GCP, while retaining the compute-heavy background-removal service on Contabo for cost efficiency.
- Configured GCP-managed Load Balancer for backend traffic distribution and Cloudflare for CDN, DNS, and security; implemented centralized logging and monitoring using Grafana Loki.

Multi-Repository CI/CD & Deployment Infrastructure

- Designed and implemented a standardized CI/CD pattern across 10+ client projects, each following a multi-repository structure (separate frontend/backend repos) with main, development, and feature branch workflows.
- Owned end-to-end repository management — created GitHub repositories and reviewed pull requests for deployment-readiness before merging.
- Built reusable GitHub Actions workflows for automated Docker image builds and deployments, managing secrets and environment configurations independently across all projects.

EDUCATION

Master of Computer Applications (MCA) — CMR Institute of Technology 2025 | CGPA: 8.6
Bachelor of Computer Applications (BCA) — Poddar International College 2023 | 65%
