PROFESSIONAL SUMMARY

DevOps Engineer with 1.8+ years of experience building and operating production infrastructure across AWS, GCP, Azure, and self-managed Linux servers. Hands-on with Docker, Kubernetes, Terraform, and CI/CD pipelines (GitHub Actions, GitLab CI/CD, Jenkins), backed by monitoring with Prometheus, Grafana, and Loki. Currently leading a small engineering team — owning delivery, code reviews, and client-facing requirement gathering while staying hands-on across infrastructure, Python/FastAPI backends, and React frontends. Reduced monthly cloud spend by ~60% through rightsizing and idle-resource cleanup, and led incident response for an AWS account compromise with production restored in under 4 hours.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, IAM, EKS), GCP (GKE, Compute Engine, Cloud Run), Azure (AKS)

Containers & Orchestration: Docker, Docker Compose, Kubernetes (K8s), Helm, KEDA, Karpenter (autoscaling)

GitOps & CI/CD: GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD, Flux, GHCR, GitOps workflows

Infrastructure as Code: Terraform, OpenTofu, Crossplane

DevSecOps & Supply Chain: Trivy, SBOM, Cosign / Sigstore, OPA, Kyverno (policy-as-code), IAM least-privilege, secrets management

Observability & Monitoring: Prometheus, Grafana, Loki, Tempo, OpenTelemetry, alert rules, health checks

Platform Engineering & FinOps: Backstage, Internal Developer Platforms (IDP), OpenCost / Kubecost, cost optimization

AI & Automation: LLM integration (OpenAI / Anthropic APIs), AIOps / anomaly detection, ChatOps, Python & Bash scripting

Networking & Security: NGINX (reverse proxy, SSL/TLS), Cloudflare (CDN, DNS, WAF), UFW, Linux hardening

Programming & Frameworks: Python, Bash, JavaScript / TypeScript, Rust, FastAPI, Node.js, React

Systems, Databases & Practices: Linux (Ubuntu/Debian), systemd, Git / GitHub, Agile / Scrum, MongoDB, MySQL, Redis

WORK EXPERIENCE

DevOps Engineer & Team Lead — GoHashInclude Pvt. Ltd. **Jan 2026 – Present**

- Own production infrastructure for multiple client applications across AWS, GCP, Azure, and self-managed VPS environments — provisioning, deployment, monitoring, and incident response.
- Reduced monthly cloud billing by ~60% by rightsizing over-provisioned instances, moving steady-state workloads to reserved/committed-use pricing, and decommissioning idle compute and unattached storage.
- Leading engineering team — sprint planning, task breakdown, code reviews, and mentoring — while remaining hands-on across infrastructure, backend, and frontend delivery.
- Drive client-facing engagement: requirement-gathering sessions, sprint demos, and technical discussions that translate business goals into delivery plans and estimates.
- Design and maintain CI/CD pipelines using GitHub Actions and GitOps workflows — automated Docker image builds, GHCR publishing, and repeatable deployments to staging and production.
- Standardised Git branching (main / development / feature) and pull-request review gates across all repositories to enforce deployment readiness and code quality.
- Built an observability stack with Prometheus, Grafana, and Grafana Loki — dashboards, centralised logging, and alert rules that cut detection time on production issues.
- Hardened Linux servers with NGINX reverse proxy, UFW firewall policies, SSL/TLS termination, and systemd service management.
- Led incident response to an AWS account compromise — terminated 300+ unauthorised EC2 instances across multiple regions, revoked leaked IAM access keys, and restored production within 4 hours; recovered ~$1,000 in fraudulent billing via AWS dispute and introduced IAM least-privilege, key rotation, and billing alerts to prevent recurrence.

Software Engineer (Backend & DevOps) — InnoSyte **Jan 2025 – Dec 2025**

- Built client applications end-to-end as a full-stack developer — designed frontend and backend architecture and shipped features using React and Python/FastAPI.
- Owned deployment on GCP: Docker containerisation, NGINX reverse proxy, SSL/TLS termination, and GitHub Actions CI/CD pipelines using Secret Manager for secure environment configuration.

- Developed FastAPI backend services for e-commerce platforms — product catalogue, order management, and Razorpay payment integration — secured with JWT authentication and role-based access control on MongoDB.
- Delivered React dashboards integrated with FastAPI services, working across the full lifecycle from local development through to production release.
- Standardised Git branching and release workflows across client repositories, reviewing every pull request for deployment readiness before merge to production.

KEY PROJECTS

Self-Healing Multi-Cloud Kubernetes Platform *AIOps · Multi-Cloud*

- Provisioned multi-cloud Kubernetes clusters (AWS EKS and Azure AKS) with Terraform and deployed workloads through ArgoCD GitOps, instrumented with Prometheus, Grafana, Loki, and OpenTelemetry for end-to-end observability.
- Built an AIOps layer that detects metric and log anomalies and uses an LLM for root-cause analysis to auto-remediate failures — pod restarts, scaling, and rollbacks — reducing mean-time-to-recovery (MTTR) by ~60% in load tests.

AI-Augmented Secure CI/CD Pipeline *DevSecOps · CI/CD*

- Designed an end-to-end GitHub Actions pipeline with build, test, Trivy vulnerability scanning, SBOM generation, and Cosign/Sigstore image signing, gated by Kyverno policy-as-code before deploying to Kubernetes.
- Added an LLM stage that auto-reviews pull requests, generates release notes, and explains failed builds in plain English, removing ~5 hours/week of manual review; supporting infrastructure provisioned with Terraform.

Self-Service Developer Platform with AI FinOps *Platform Engineering · FinOps*

- Built an internal developer platform (IDP) on Backstage with Terraform and Crossplane golden paths, letting developers self-provision a repo, CI/CD pipeline, and Kubernetes namespace in minutes instead of days.
- Integrated OpenCost FinOps dashboards and a ChatOps assistant that answers natural-language cost questions and recommends rightsizing, with Karpenter and KEDA autoscaling for cost-efficient scaling.

EDUCATION

Master of Computer Applications (MCA) — CMR Institute of Technology 2025 | CGPA: 8.6

Bachelor of Computer Applications (BCA) — Poddar International College 2023 | 65%
