PROFESSIONAL SUMMARY

DevOps Engineer with ~2 years of experience owning production infrastructure, CI/CD, and observability for multiple client applications across AWS, GCP, and Azure. Hands-on with Kubernetes, Terraform, Ansible, GitOps (ArgoCD), DevSecOps tooling, and LLM-driven AIOps automation. Cut monthly cloud spend by ~60% through FinOps practices and led incident response for an AWS account compromise, restoring production in under 4 hours.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, IAM, EKS, Cost Explorer), GCP (GKE, Compute Engine, Cloud Run, Secret Manager, IAM), Azure (AKS, Virtual Machines, Blob Storage, Azure Monitor)
Containers & Orchestration: Docker, Docker Compose, Kubernetes (EKS, GKE, AKS), Helm
GitOps & CI/CD: GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD, GHCR, GitOps workflows
IaC & Config Management: Terraform (modules, remote state, workspaces), Ansible
Observability & Monitoring: Prometheus, Grafana, Loki, OpenTelemetry, alert rules, health checks
DevSecOps & Supply Chain: Trivy, SBOM, Cosign/Sigstore signing, Kyverno policy-as-code, IAM least-privilege, Linux hardening
Programming & Frameworks: Python, Bash, FastAPI, JavaScript / TypeScript
Systems, Networking & Databases: Linux, systemd, NGINX, Cloudflare (CDN, DNS, WAF), Git, MongoDB, MySQL, Redis
FinOps & Cost Optimisation: Cost Explorer, tagging strategies, budgets & billing alerts, rightsizing, reserved pricing, Infracost
AI & MLOps: GPU model serving (Whisper speech-to-text, image background removal; CUDA, Docker), LLM analysis pipelines, LLM-driven AIOps (anomaly detection, RCA, auto-remediation), Claude Code, Copilot

WORK EXPERIENCE

DevOps Engineer — GoHashInclude Pvt. Ltd. **Jan 2026 – Present**

- Own production infrastructure and CI/CD for multiple client applications across AWS, GCP, Azure, and self-managed VPS — Terraform/Ansible provisioning, GitHub Actions and ArgoCD GitOps pipelines, monitoring, and incident response.
- Drove FinOps: reduced monthly cloud billing by ~60% via Cost Explorer analysis, resource tagging for cost allocation, budgets and billing alerts, rightsizing, reserved/committed-use pricing, and decommissioning idle compute and unattached storage.
- Built an observability stack (Prometheus, Grafana, Loki) — dashboards, centralised logging, and alerting.
- Deployed OpenAI Whisper on a dedicated GPU server (Docker, CUDA) for multilingual voice-to-text transcription, exposed as an API consumed by the client's backend; added an LLM analysis stage that turns transcripts into structured reports.
- Deployed a GPU-hosted image background-removal model as a containerised inference service with health checks and monitoring, routing backend requests to the GPU.
- Led incident response to an AWS account compromise — terminated 300+ unauthorised EC2 instances across multiple regions, revoked leaked IAM access keys, and restored production within 4 hours; recovered ~$1,000 in fraudulent billing via AWS dispute and introduced IAM least-privilege, key rotation, and billing alerts to prevent recurrence.

Software Engineer (Backend & DevOps) — InnoSyte **Jan 2025 – Dec 2025**

- Owned deployment of client applications on GCP and AWS (EC2, S3, IAM): Docker containerisation, NGINX reverse proxy, SSL/TLS termination, Cloudflare DNS/Workers, and GitHub Actions CI/CD pipelines with Secret Manager for environment secrets.
- Built and shipped Python/FastAPI backend services and React frontends for e-commerce clients through to production release, including JWT auth, RBAC on MongoDB, and payment integration.

KEY PROJECTS

Self-Healing Multi-Cloud Kubernetes Platform *AIOps · Multi-Cloud*

- Multi-cloud Kubernetes (AWS EKS, Azure AKS) provisioned with Terraform, deployed via ArgoCD GitOps, instrumented with Prometheus, Grafana, Loki, and OpenTelemetry.
- AIOps layer detects metric/log anomalies and uses an LLM for root-cause analysis to auto-remediate (pod restarts, scaling, rollbacks), cutting MTTR by ~60% in load tests.

AI-Augmented Secure CI/CD Pipeline *DevSecOps · CI/CD*

- GitHub Actions pipeline with build, test, Trivy scanning, SBOM generation, and Cosign/Sigstore image signing, gated by Kyverno policy-as-code before Kubernetes deploy; infrastructure provisioned with Terraform.
- LLM stage auto-reviews pull requests, generates release notes, and explains failed builds in plain English, saving ~5 hours/week.

EDUCATION

Master of Computer Applications (MCA) — CMR Institute of Technology 2025 | CGPA: 8.6
Bachelor of Computer Applications (BCA) — Poddar International College 2023 | 65%

CERTIFICATIONS

Oracle Cloud Infrastructure Certified Architect Associate — Oracle
